The above-mentioned project was an Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for job number J6U0807, which were signed in 2002. Since that time, there have been changes that include proposed improvements not associated with the signed and approved Preferred Alternative.

MoDOT is proposing a change in design of the intersection at Route 141 and Ladue Road. The original interchange design, as described in the EA, was a single point interchange at Ladue Road with a two-lane roundabout at Woods Mill Road. Since the time of the document approval the interchange has been modified to exclude the two-lane roundabout from the interchange design at Ladue Road. By excluding the roundabout and using just the single point interchange the amount of right of way is reduced by four acres, individual property owner impacts are reduced, and operationally the single point interchange performs better than other proposed interchange designs. An informational meeting for the project is to be held in March or April in which the changes to the interchange will be on display.

The cultural and environmental elements involved in the study area are well within the footprint of the original EA. We request your concurrence that a Finding of No Significant Impact, signed by FHWA on December 18, 2002, is still valid.
